Hiring team, Product Engineering
Acme Corp

Dear hiring team,

I am applying for the Senior Product Engineer role. For the last seven years I have built web applications for people who do not think of themselves as technical: small-business owners at Fernbrook Labs, warehouse operators at Tidewater Robotics. What I enjoy most is the part of the job where a vague request turns into something a person can use without reading a manual, and Acme's tools for small teams look like exactly that kind of work.

At Fernbrook I lead the engineering of the customer-facing app. When I joined, page loads were slow enough that support tickets mentioned it; I moved rendering to the edge, cut the client bundle in half, and brought p95 load time from 3.1 to 1.8 seconds. I also introduced end-to-end testing across the product, which took release incidents from monthly to fewer than one a quarter, and I mentor three engineers who are now shipping features on their own. At Tidewater I wrote the on-device data pipeline in Go that has to keep working through days without a network connection, which taught me to design for the unhappy path first.

I would bring that mix to Acme: product judgement, care for performance and reliability, and a habit of writing things down so the next person does not have to ask. I am based in Portland and would be glad to work from the office or remotely.

Thank you for your time. I would welcome the chance to talk about the role.

Sincerely,
Tessa Marlowe
